

PAEDIATRIC DENTISTRY

FRIDAY, NOVEMBER 8, 2019
DUBLIN DENTAL UNIVERSITY HOSPITAL

COURSE: 9.00AM TO 5.00PM

This day-long, hands-on course and lecture will provide an overview of the management of a child patient in a private practice setting, from examination to diagnosis and management of caries and traumatic dental injuries.

Objectives of seminars:

- to discuss age-appropriate clinical and radiographic examination techniques for children;
- to highlight communication skills with children and parents;
- to understand the importance of risk assessment and prevention, and the various approaches for different conditions;
- to interpret the signs of oral injury in children; and,
- to emphasise the importance of tooth history, as well as clinical and radiographic signs, in treatment decisions.

Objectives of hands-on course:

- to practice isolation techniques;
- to perform basic restorative techniques; and,
- to demonstrate the clinical techniques involved in placement of stainless steel crowns on primary molars (Hall technique and conventional).

Learning outcomes:

- to have an awareness of appropriate management of the child patient for clinical and radiographic examination;
- to be knowledgeable in the diagnosis of caries, the use of risk assessment tools, and the diagnosis of traumatic injuries in primary teeth;
- to be aware of the various minimal intervention options for caries management;
- to know the biological processes in the management of carious primary teeth; and,
- to be able to place stainless steel crowns on primary molars using the conventional approach and the Hall technique.
